maxima or minima can also be called an extremum i.e. an extreme value of the function. Let us have a function  $y = f(x)$  defined on a known domain of  $x$ . Based on the interval of  $x$ , on which the function attains an extremum, the extremum can be termed as a 'local' or a 'global' extremum.

This chapter discusses the theory of maxima and minima. The theory of ordinary maxima and minima is concerned with the problem of finding the values of each of  $n$  independent variables  $x_1, x_2, \dots, x_n$  at which some function of the  $n$  variables  $f(x_1, x_2, \dots,$
