terminal of the coil. Crank the engine. The test light should pulse bright and dim. If the light does not pulse, replace the ignition module. If the light does pulse, replace the coil.

ONAN IGNITION SYSTEM TROUBLESHOOTING

Check the fuel levels. If your Onan generator isn't running, it may be because fuel levels are too low. While some RV generators will run until the fuel tank has nothing but fumes, the Onan models tend to stop working when you're down to a quarter tank. The units that do this are the ones drawing from the gas tank.

Onan Generator Troubleshooting; 13 Tips For RV Generator

a result of using this Troubleshooting Guide. Getting the Engine Running Before any evaluation of the controls, regulator or generator can proceed, the Onan engine must have oil and fuel, be in running condition and the 12-volt battery charged. The electronic governor, 151-0752, on Models BGM and NHM, Spec B and later, must be functioning properly.
