Web Services Patterns: Java™ Platform Edition | SpringerLink

Web Services and the Java platform have dramatically different architectural styles. The Web Service architecture, based on the service-oriented architecture, has its roots in the component-based architectural style, and it facilitates all of the dominant communication architectural styles: message-based and call- return.

our web services applications.

JavaRanch Book Reviews - A friendly Place for Java Greenhorns

The service locator design pattern is used when we want to locate various services using JNDI lookup. Considering high cost of looking up JNDI for a service, Service Locator pattern makes use of caching technique. For the first time a service is required, Service Locator looks up in JNDI and caches the service object.
